## Valaan muotokuva

*Portrait of a Whale*

(2003)

viola da gamba and tape

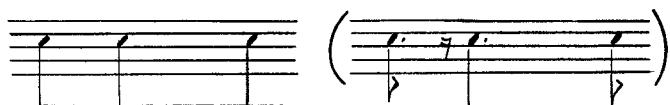

Duration: 11'34"

## Notation

Sampsia Ertamo: Valaan muotokuva (*Portrait of a Whale*)

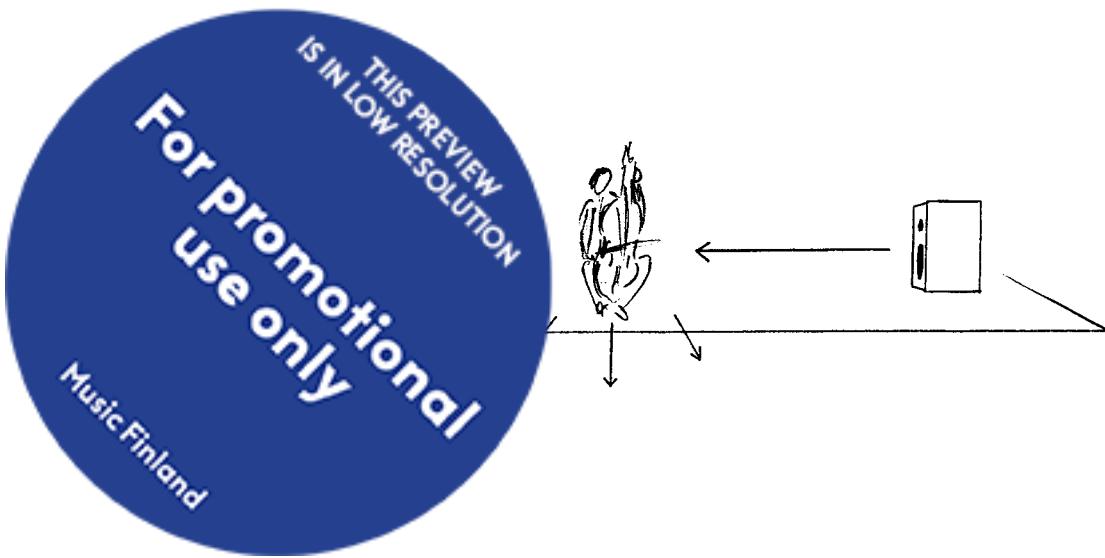

There is no time signature or tempi in this piece. The speed of music and playing is totally dependent on the tape-part. The passage of time is shown at the beginning of every system (like bar numbers). The duration of a system is always 30 seconds. I haven't marked other seconds because gamba-player has to follow tape-part and not some time markings. Because the time goes steadily in the score the rhythms of the gamba-part are shown optically. Here and there is a vertical line indicating when to begin or conclude a passage. This clarifies also the speed of playing one. In any case it is obvious that gamba-player must know thoroughly the tape/cd-part. In this score the beam indicates the length of a note. It shows also if there is a break or not between the notes. See example:

The gamba-part is to be played with 'baroque-tuning'. Basically all notes are 'in B'. The tuning should be: A = 415. (One can make improvements on the tuning by listening the tape-part.) To make the score clearer and more easy to see chords and unisonos I have notated the tape-part also 'in B' / A = 415. Gamba should be a 7-string instrument and tuned (these are written notes):

Both parts should have equal audibility and importance. Loudspeakers and gamba should be on stage as a well-balanced duo. The setting of volume for the tape-part should be supporting this view. However setting should not be changed during the performance. It depends on location how the loudspeakers should be placed. In any case I would prefer not to have the sounds moving in space. I would like the sounds of both parts equally fill up the place or come from one spot. One way of placing the loudspeakers could be as follows:

# note raised a 1/4 tone

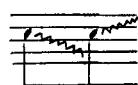

↓ note lowered a 1/4 tone

crescendo dal niente

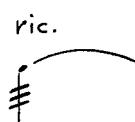

diminuendo al niente

Glissando con vibrato, with a trembling sound

(Normal glissandi should be done always in a way that the frets would not be heard.)

Because of length of the note ricochet can be played:

Two-finger vibrato.

Same notes two or three times.

Keep the volume steady.
